87-4

This projects consits of the construction of railroad shoofly tracks and wood trestles on both the north and south sides of the existing railroad underpass. Some storm sewer installation, traffic control items, and miscellaneous work is included.

TABLE OF CONTENTS

NOTES

100 010 GENERAL: The engineer will see to the removal of existing fences to the highway right of way line and to the relocation or adjustment of utility facilities as shown on the plans. All privately-owned light poles, guard posts, signs, etc., within the right of way limits shall be removed by the owners.

100 020 WORK SCHEDULE: In order to minimize interference with traffic operations, a detailed schedule shall be agreed to prior to beginning work, between the engineer, utility companies, and the contractor and subcontractors, if any.

100 030 UNDERGROUND UTILITIES: The contractor shall notify the local utility companies prior to the beginning of construction, so they may stake location and depth of all utilities in the project area. Subcutting or scarifying over utility lines may be eliminated if, in the opinion of the engineer, a hazardous situation exists. Separate plans, if any, showing relocation or adjustment work to be performed by utility companies to accommodate highway construction will be made available to the contractor, upon request to the engineer.

100 P01 REMOVAL OF TRACKS: The existing railroad spur tracks located north and west of the existing underpass will be removed by the Burlington Northern Railroad as required to provide room for construction of the shoofly by the contractor.

100 P02 PAVEMENT REPAIR: The contractor will be required to repair the existing pavement that is damaged due to pile driving, storm sewer installation, or other construction activities. If the existing curb and gutter is destroyed or damaged during construction of the trestles, the contractor shall make repair (patching, temporary curbs, etc.) as required to maintain the present drainage patterns. Bituminous surfacing can be used for the patches, repairs, or for constructing temporary curbs if required. The cost of this repair work will not be paid for separately but shall be included in the price bid for other items.

100 P03 The contractor will be required to notify the following individual at least 48 hours prior to starting any work on this project:

W. R. Grimstad
Yellowstone Division Superintendent
2718 Montana Avenue
Billings, MT 59101
Telephone: (406)256-4221

100 P04 The temporary access easements between Main Street and the railroad as shown on the right of way and easement layout sheet have been provided for use by the contractor for equipment access to the north shoofly construction area. In the northeast quadrant, it will be necessary to drive over the existing curb and gutter and adjacent to the Mandan Supply building to get to the construction site. Adequate flagging will be provided at all times during the movement of equipment and machinery. The temporary easement in the southeast quadrant can be used by the contractor for equipment and machinery storage and parking area. Upon completion of the project, the area shall be cleaned up to the satisfaction of the engineer in the field.

100 P05 SOIL CONTAMINATION: During the soil survey, which was done in February 1986, some of the borings taken in an area west of the north trestle contained some hydrocarbon contaminated clay and sand. It is assumed this contamination is due to a gasoline spill or leak from the gasoline storage tanks in this area. This information is furnished to the contractor so that any appropriate action deemed necessary can be anticipated. Additional information concerning this contamination can be obtained by contacting the State Highway Department Materials and Research Division in Bismarck, North Dakota. The telephone number is (701)224-4382.

100 P06 AMERICAN RAILWAY ENGINEERING ASSOCIATION SPECIFICATIONS: Inquiries pertaining to the A.R.E.A. Specifications can be directed to the Burlington Northern Division Engineer at Billings, Montana. The phone number is 406-256-4313.

100 133 The contractor will be required to conduct the construction activities in such a manner as to comply with the Air Pollution Control Regulations of the state of North Dakota. Water will be used to control dust on the construction site.

100 160 UTILITY POLES: Equipment shall work around utility poles within the construction area that are not to be disturbed.

107 100 RAILWAY PROTECTION INSURANCE: Insurance policies for Railway Protection Insurance and for Public Liability Insurance as required by Section 107.06 of the Standard Specifications and Supplemental Specification 107.07 shall be obtained by the Contractor at Stations 0+00 to 19+00 for protection of Burlington Northern Railroad.

200 010 SHRINKAGE: 20 percent additional volume in yardage computed by the end area method is allowed for shrinkage in earth embankment.

NOTES

200 420 RAILROAD FLAGGING: The contractor will reimburse the Highway Department for the actual cost of railroad flagging. Railroad flagging is not a separate pay item, but shall be included in the price bid for "Excavation." Approximate rate is $17 per man hour. Haul operations across the Burlington Northern Railroad will require flagging. A minimum of three flagpersons will be required at each railroad crossing. Forty-eight hour advance notice will be required.

200 252 WASTE DISPOSAL: All excess excavation and old concrete sidewalks, driveways, curb and gutter, pavement, bituminous surfacing, etc., shall be disposed of off the highway right of way at a site selected by the contractor and approved by the Engineer. Disposal in wetland areas will not be approved. The cost of disposal (and obtaining of the disposal area) shall be included in the price bid for other items.

200 P01 WATER: The cost of water required for compaction, for the aggregate base course and for use as a dust palliative, has been included in the quantities and shall be paid for at the unit price bid for "Water."

200 P02 SOUTH SHOOFLY EXCAVATION: The south shoofly will be constructed over a low area that is used as a "holding pond" for the water discharged from the existing storm sewer lift station. The water table in this specific area can be very high depending on the weather and the amount of water pumping into the ponding area. It may be necessary to divert the discharge water into the new storm sewer and/or lower the ground water table in this area prior to the removal of the excavation and subcut. Cost of any pumping, special equipment, handling, etc., shall be included in the price bid for "Common Excavation - Type A."

200 P03 SUBCUT, SCARIFY, AND RECOMPACT: The area under the south shoofly shall be subcut to the elevation and dimension shown in the plans. The first two feet above the subcut shall be backfilled with Class 5 Aggregate Base as shown on the typical section. The excavation and subcut material can be used for filling the holding pond outside of the shoulder line. Some drying may be required. The remainder of the backfill material shall be obtained from borrow. The existing ground under the north shoofly roadway shall be scarified and recompacted for a depth of 12 inches as directed by the engineer. The subcut has been included in the quantities and shall be paid for at the unit price bid for "Common Excavation - Type A." The cost of scarifying and recompacting shall be included in the price bid for "Borrow."

200 360 COMPACTION AND DENSITY CONTROL: Compaction and density controls shall be in accordance with Section 203.02 F of the Standard Specifications T-180. This includes the Class 5 aggregate base.

618 P01 UNTREATED TIMBER: Payment for untreated timber will be based on plan quantity. Lumber pieces will not be measured individually for payment.

704 P01 MAINTAINING TRAFFIC: The contractor shall provide at least one lane for traffic at all times except possibly during the pile driving operations when it may be necessary to stop all traffic during construction within the two open spans. The roadway must be open to two-way traffic during the hours of 10:00 P.M. to 7:00 a.m.

704 P02 SIGNS: The signs listed below have been included in the quantities and shall be paid for at the unit price bid for "Traffic Control Signs."

Sign Description	Sign Number
Route Marker	M1-5-24
Vertical Clearance Symbol	W12-2-48
Road Narrows	W5-1-48

Upon completion of the project, the route markers shall be removed and the vertical clearance signs and the road narrows signs shall remain in place. All of these signs shall become the property of the State Highway Department.

706 010 FIELD LABORATORY: If deemed unnecessary by the engineer in the field, the item "Field Laboratory" shall be deleted.

714 040 DRAINAGE: If the existing drainage facilities become inoperable before the new drainage system is functioning, the contractor shall provide sufficient temporary pumping and drainage facilities to keep the roadway drained to the satisfaction of the engineer. Not a pay item, cost to be incidental to the price bid for other items.

722 P01 MANHOLE: At Station 9+21± Lt., the new 48" manhole will be installed over the existing 15" storm sewer pipe. The cost of removing and replacing the existing storm sewer, the cutting, grouting, and all other work required to complete this installation shall be included in the price bid for "Manhole - 48 In."

NOTES

752 P01 SAFETY FENCE: A temporary safety fence shall be installed (and maintained) by the contractor at locations designated by the engineer as needed for pedestrian control. The safety fence shall be orange in color, 4 feet high, and constructed of high density polyethylene and shall be installed in accordance with manufacturer's recommendations. Tensor Corporation fence product No. UX 4050 or equal can be used. The quantity of fencing shown is advisory only and the actual amount needed shall be determined in the field as required for the construction sequencing.

The price bid for "Safety Fence" shall be full compensation for all labor, equipment, and materials necessary to complete the work as required.

920 P01 GEOTEXTILE REINFORCEMENT FABRIC: The geotextile fabric shall conform to the AREA Specifications for heavy fabric (typical weight 12 to 16 oz./s.y.). The fabric shall be measured by the actual surface area covered to the nearest square yard with no allowance for overlaps. The quantities measured as provided will be paid for at the contract unit price for "Geotextile Reinforcement Fabric" complete in place.

980 P01 RAILROAD BALLAST: Crushed stone complying with American Railway Engineering Association (AREA) Specification for No. 4 gradation with a nominal size square opening of 1½" to 3/4" shall be used as ballast.

980 P02 RAILROAD BALLAST: An additional 1300 tons of railroad ballast has been included in the quantities and shall be stockpiled for use by Burlington Northern Railroad. The ballast shall be stockpiled in the temporary easement area east of Highway 1806 and south of the railroad tracks. The exact location and dimension of the stockpile shall be determined by the engineer. This stockpiled material shall be measured and paid for at the unit price bid for "Railroad Ballast."

980 P03 RAILROAD TRACK: This item consists of furnishing and placing the ties, rails, and fastenings on the ballast at the locations shown on the plan and profile sheets and as specified herein. The construction and material for the track work and trestles shall comply with the applicable specifications and standards of the American Railway Engineering Association (A.R.E.A.) and/or the North Dakota State Highway Department.

RAIL: All rail shall be new or good relayer rail and shall be 115 pounds or greater. The rail shall be in standard 39 foot lengths and shall be smooth on the head, straight in line without bends, twists, waves, or kinks. Only one weight of rail shall be used throughout the project. Rail shall meet the approval of the North Dakota State Highway Department. The dimensions and elevations shown in the plans are based on the use of 115 pound rail. If a heavier rail is used, required adjustments in elevation shall be made accordingly.

TIE PLATES: The tie plates shall be new or good used plates and shall be of the proper size and punched to fit the base of the rail.

JOINT BARS: Joint bars shall be new or good secondhand material and shall be of the correct size and weight to fit the rail. All bars shall be free of defects and straight in the vertical and horizontal planes.

TRACK BOLTS, NUTS, AND SPRING WASHERS: Track bolts shall be heat treated carbon steel. Nuts shall be medium carbon steel. Bolts, nuts, and spring washers shall be of the size recommended to fit the joint bar and rail. Bolts, nuts, and spring washers shall be new material in conformance with A.R.E.A. specifications.

TRACK SPIKES: Track spikes shall be new, conforming to the requirements of A.R.E.A. specifications, size 5/8" x 6". Reinforced throat high carbon steel track spikes shall be used.

TIES: Ties shall be new and shall be of mixed hardwood species that are sawed or hewn on sides, top, and bottom. Hardwood ties shall have an approved type of anti-splitting device installed in each end before treatment. Ties shall be adzed and drilled for spikes prior to treatment. Treatment shall be in accordance with the applicable provisions of Fed. Spec. TT-W-571 for creosote or solutions containing creosote. The ties shall conform to the applicable requirements of the AREA manual, Size 7"x9"x8'-6".

All track construction shall be performed under the direction of qualified and competent supervisory personnel, including foremen and gang leaders, experienced in railroad construction. All track construction not covered specifically herein shall be in accordance with AREA specifications and recommended practices.

Roadbed surface, grade, and drainage shall be approved prior to any distribution of construction material. The contractor shall use equipment that will not form ruts or water pockets when distributing material over the finished roadbed. Depressions shall be filled and compacted prior to track laying.

Rail shall be loaded and unloaded with an approved derrick or crane and placed with the head up without dropping and with sufficient support under the base. Rail shall be handled carefully at all times to prevent kinking or nicking and shall not be unloaded from carts or trucks in motion. Rails unloaded and distributed for laying shall be placed parallel with the track on the edge of the roadbed opposite the locations in which they are to be placed in the tracks.

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	FG-1-806(015)069	6

NOTES

Rail shall be laid so that the joints on one rail shall not vary more than 36 inches in either direction from the center of the opposite rail. If it is necessary to field cut any rail, it shall be done with a power rail saw. The sawed rail ends shall be chambered and end hardened. New bolt holes required shall be drilled and chamfered using a template to insure accurate location of holes. The use of an acetylene torch will not be permitted in cutting rails or making holes in rails.

Rail shall be laid without bumping or striking with the ends square.

Rail joints shall be applied before the track is spiked. When preplaced ties are not used, the north rail on tangents and the outside rail on curves shall be spiked first. After the first rail is lined and spiked, the opposite rail shall be lined to accurate gauge using track gauges simultaneously placed at every fourth tie on tangents and at every third tie on curves. The gauge spikes shall be fully driven before the gauges are removed. The contractor shall bore 9/16" diameter holes for anchor spikes and place anchor spikes after the gauge spikes are driven. All rail laid on any given day shall be fully spiked and bolted and anchored at the end of the day's work.

Crossties shall be so handled as to avoid breaking or bruising. They shall not be thrown from cars or trucks onto rails, other track material, or rocks. Moving and placing ties with picks, spike mauls, sledges, or shovels is prohibited. Surfaces damaged, cut or drilled in the field shall be coated with an approved preservative.

Ties shall be placed with the adzed side up and at right angles to the centerline of track.

Timber crossties shall be placed on approximately 20-1/2" centers, with 23 ties per 39 feet of rail unless otherwise directed.

All track on timber ties shall be fully tie plated. Tie plates shall be installed by the contractor so that the rail will have full bearing on the plate and the plate will have full bearing on the tie. All bearing surfaces of ties, tie plates, and rail shall be cleaned before the rail and plates are laid. Tie plates shall be so placed that the shoulder is in contact with the base of rail for the entire length of shoulders, and shall be centered as nearly as appropriate over the prebored gauge spike holes. Plates shall be installed with cant in proper direction.

All rail shall be laid accurately to standard gauge at the time the rail is laid. The standard gauge of track shall be 4' - 8½" between points 5/8" below the top of rail on the two inside edges of the rail. On tangents and curves, the track shall be accurately laid and maintained to standard gauge of 4' - 8½". All track gauges used by the contractor will be checked by the railroad. If found to be more than 1/16" in variance from the master gauge, they shall immediately be removed from the job.

Joint bars shall be set in proper position and secured firmly in place by the full number of bolts and washers before track is fully spiked. Nuts shall be installed with the bevel end of the nut bearing against the lock washer. All bolts shall be tightened with approved bolt machines to within a range of 20,000 to 25,000 lbs. per bolt. Bolting shall start with the center bolts working toward the ends and all nuts shall be turned up tight with the bolt heads staggered inside and outside of the rail alternately. All joint bars and rail ends covered by the bars shall be cleaned of all foreign material. All joint bars, rail ends, bolts, nuts, and washers shall be well coated with corrosion resistant grease before installing.

Rail anchors shall be applied immediately after track is fully spiked, contractor shall box anchor each tie for each thirty-nine foot rail length at each end of each track and box anchor alternate ties for the remainder of the rail per detailed drawing, except no anchors shall be placed on ties at which joints occur in either rail. Anchors shall have full bearing against the tie.

Whenever the bearing of rail anchors against the tie is disturbed, the anchors shall be tightened or reset by an approved mechanical device, or they shall be taken off and reapplied in proper position by means of the rail anchor applicator, except that adjustments of less than one inch may be made by driving the anchors along the rail. In carrying out adjustments by driving along the rail, care shall be taken to avoid overdriving or damaging the anchors and to avoid skewing of the anchor on the rail.

NOTES

Rails shall be spiked to each timber crosstie using two gauge spikes and two anchor spikes in accordance with detailed drawing. Spikes shall be driven vertically and not inclined under the rail. Gauge spikes shall be driven close against the base of the rail. Care shall be taken to prevent injury to the rail by a blow from the spike maul. In no case shall the spikes be overdriven or straightened while being driven. Except when using preplated ties, the gauge shall always be used when spiking and no lifted until the spikes are fully driven.

Gauge at least every third tie on curves and every fourth tie on tangents. The rail shall be held to proper gauge by use of track lining bars while spikes are driven. The removal of spikes once driven shall be avoided whenever possible. When spikes are pulled, the holes shall be plugged with treated wood plugs, using care in driving when straight so as to avoid breaking before they are driven their full length.

Railroad ballast shall be paid for by the number of ton used in the accepted work. This payment will be full compensation for all labor, equipment, and materials necessary to complete the work in accordance with the plans and specifications. (See Note 980-P02).

Railroad track shall be paid for by the lineal foot of accepted track measured along the centerline between rails. The price bid for "Railroad Track" will be full compensation for all materials, labor, and equipment required to construct the track in accordance with the plans and specifications. All material necessary to install the railroad tracks including, but not limited to rails, joint bars, track bolts, nuts, spring washers, tie plates, spikes, and ties will be incidental and the cost of these items will be included in the price bid for "Railroad Track." The rails that are installed on the timber trestles have been included in the quantities and shall be paid for at the unit price bid for "Railroad Track."

Geotextile Reinforcement Fabric shall be measured and paid for in accordance with Note 920-P01.

BASIS OF ESTIMATE

Description

Aggregate Base Course - Cl. 5: 1.5 Ton/C.Y. plus 25%

Railroad Ballast: 1.5 Ton/C.Y.

Water: 10 Gal./C.Y. of estimated embankment quantity and 20 Gal./Ton of aggregate base course. An estimated amount of water has been included in the quantities and shall be used as a dust palliative.

Seeding: The entire area disturbed by construction of the shooflys, storm sewer, etc., shall be seeded. The exact limits for seeding shall be determined in the field.

MAXIMUM SIZE OF AGGREGATE

Description	Type of Aggregate	Max. Size
Aggregate Base Course, Cl. 5	Crushed	3/4"

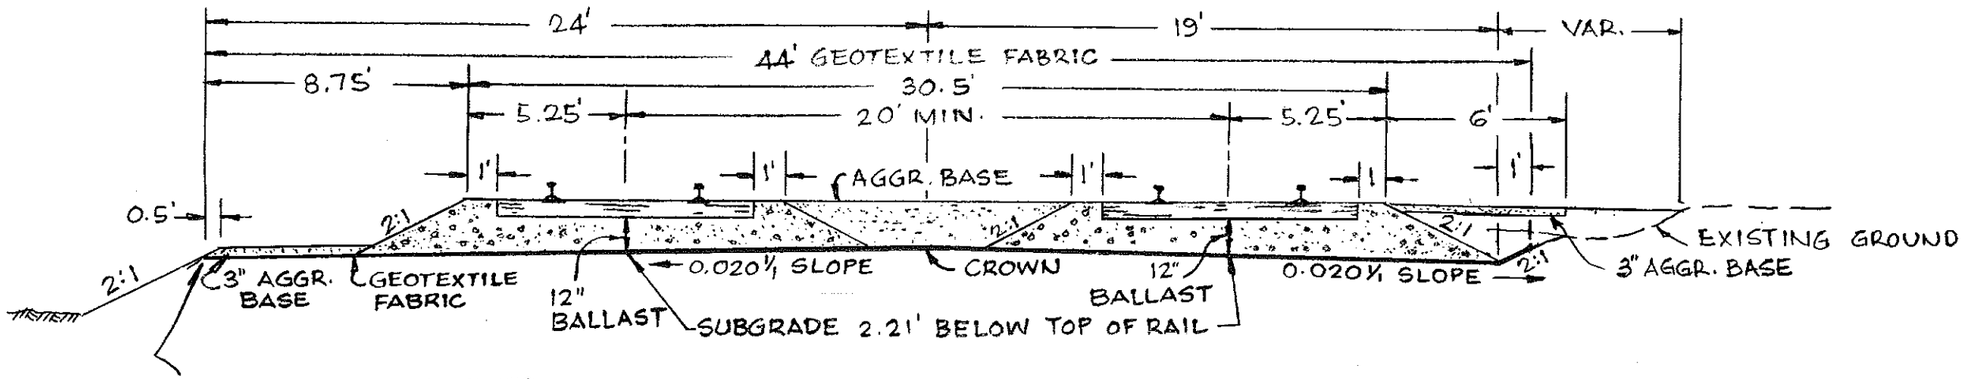
FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	FG-1-806(015)	11

TYPICAL SECTIONS

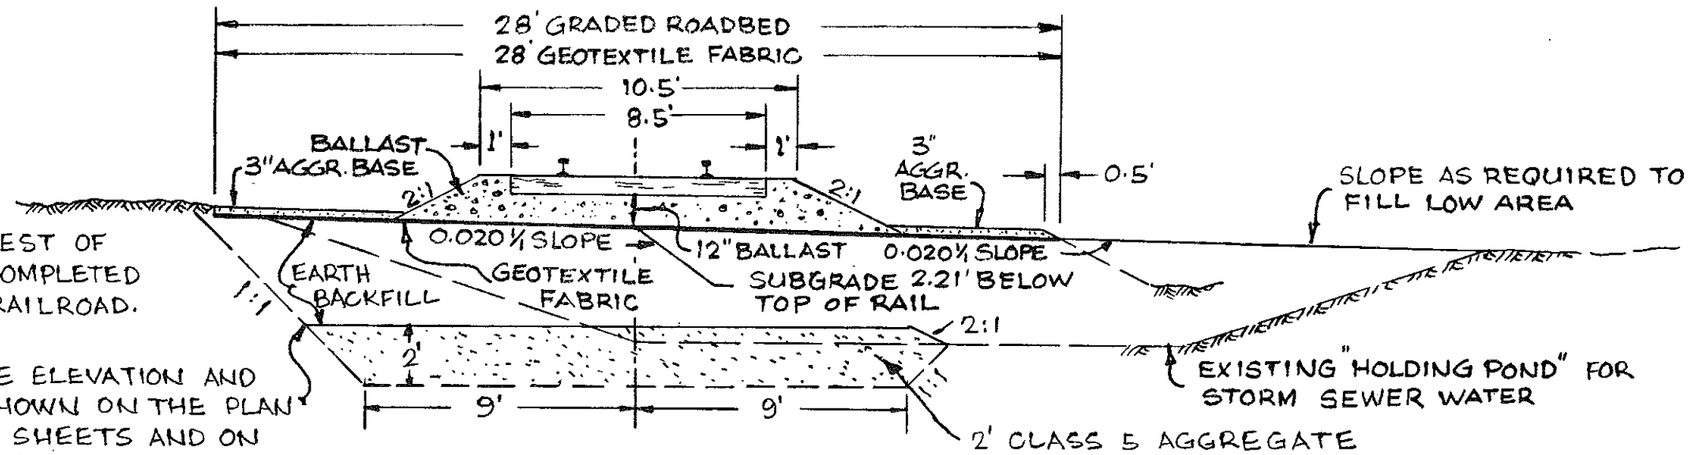


NOTE: WIDTH OF GRADED SHOULDER SHALL BE REDUCED BY 2' FROM STA 13+70± TO 14+15± TO ALLOW MORE CLEARANCE AT THE FARMERS UNION BUILDING.

NORTH SHOOFLY

STA. 6+56.87 TO 15+12.83 (MAIN LINE SHOOFLY)
STA. 7+65.12 TO 14+05.12 (TRACK Nº1 SHOOFLY)

NOTE: The subgrade elevation (2.21' below the top of rail) is based on the use of 115 pound rail. If heavier rail is used, adjustments shall be made accordingly.



ALL TRACK CONSTRUCTION WEST OF THE SOUTH TRESTLE TO BE COMPLETED BY BURLINGTON NORTHERN RAILROAD.

SUBCUT TO THE ELEVATION AND DIMENSION SHOWN ON THE PLAN AND PROFILE SHEETS AND ON THE CROSS SECTIONS.

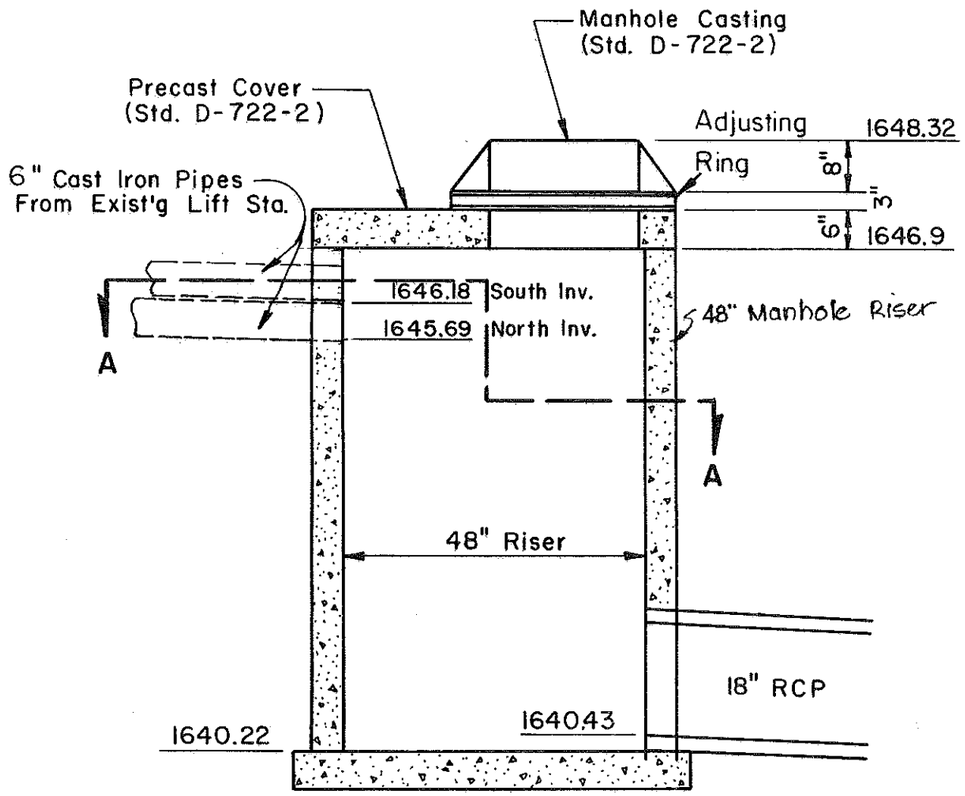
SOUTH SHOOFLY

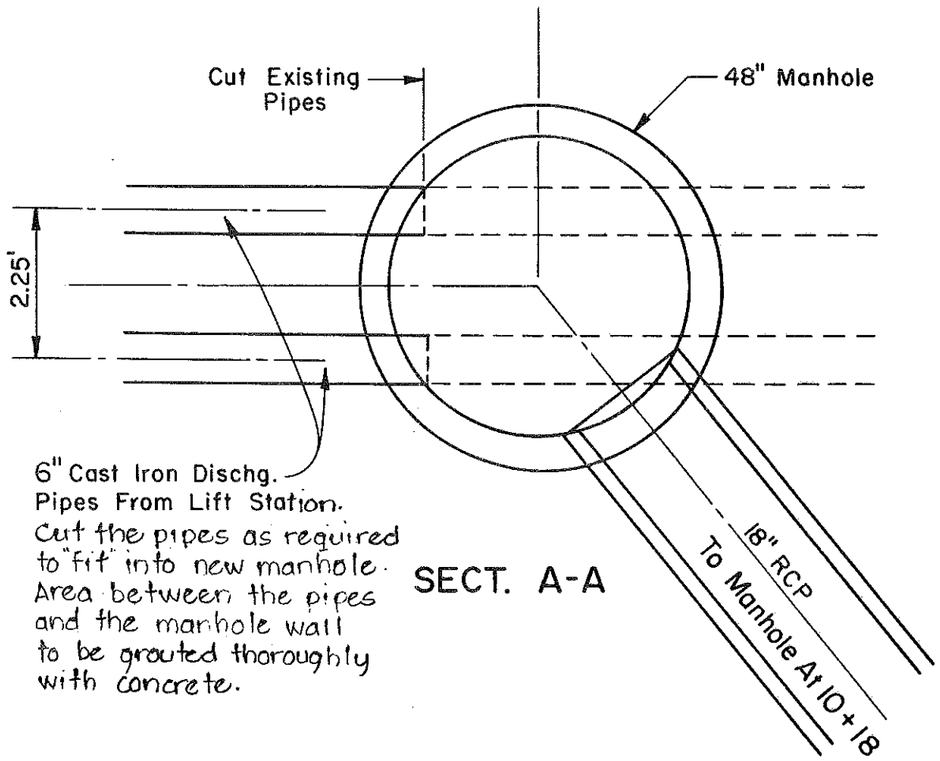
* STA. 9+52.6 (EAST END OF TRESTLE) TO STA. 13+11

* RAILS TO BE INSTALLED ON TRESTLE FROM STA. 8+43.3 TO 9+52.6

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	FG-1-806(015)069	12

48" MANHOLE – 9+80 RT.





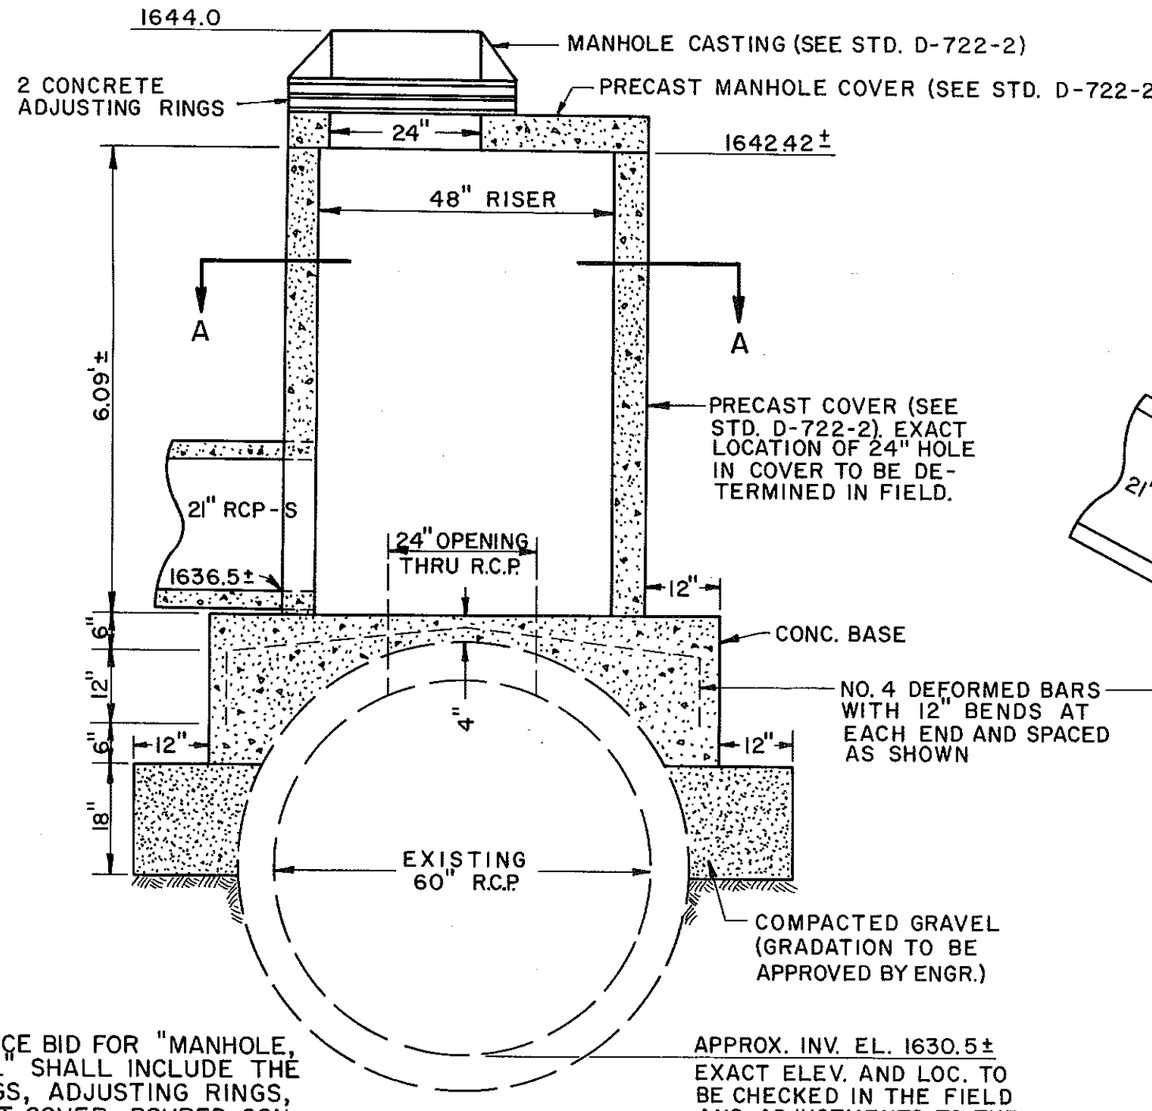
6" Cast Iron Dischg. Pipes From Lift Station. Cut the pipes as required to "fit" into new manhole. Area between the pipes and the manhole wall to be grouted thoroughly with concrete.

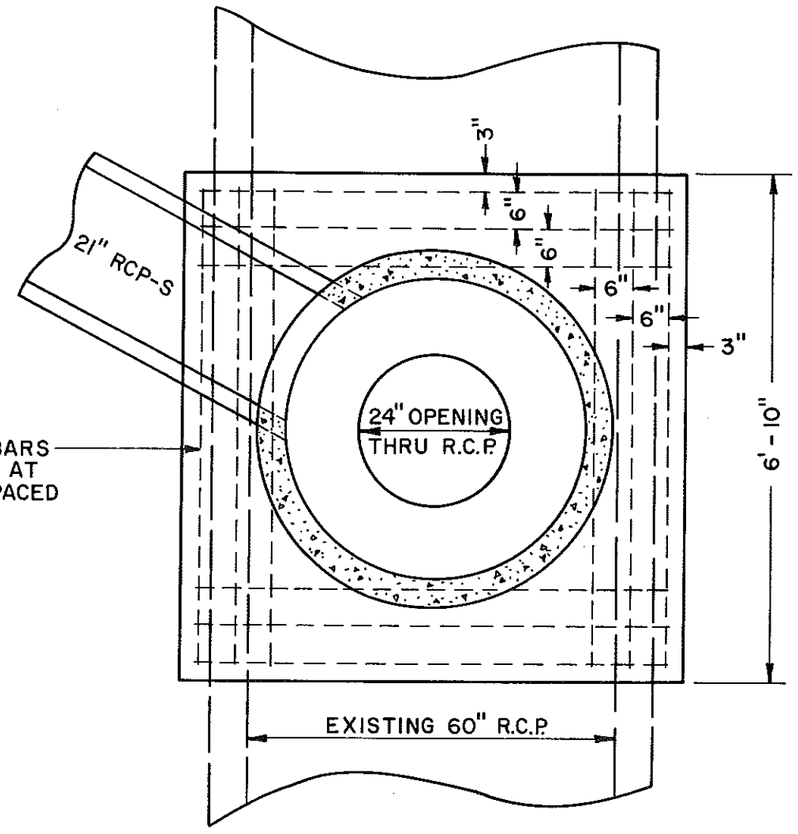
SECT. A-A

FHWA REGION	STATE	FED. AID PROJ. NO.	SHEET NO.
8	N.D.	FG-1-806(015)069	13

SPECIAL MANHOLE

STA. 15+90± RT.





SECTION A-A

NOTE: THE PRICE BID FOR "MANHOLE, SPECIAL" SHALL INCLUDE THE CASTINGS, ADJUSTING RINGS, PRECAST COVER, POURED CONCRETE BASE AND THE GRAVEL. THE RISER HAS BEEN INCLUDED IN THE QUANTITIES AND SHALL BE PAID FOR AT THE PRICE BID FOR "MANHOLE RISER - 48 IN."

CARE WILL BE REQUIRED AT THE TRESTLE BENTS.

TYPICAL SECTION

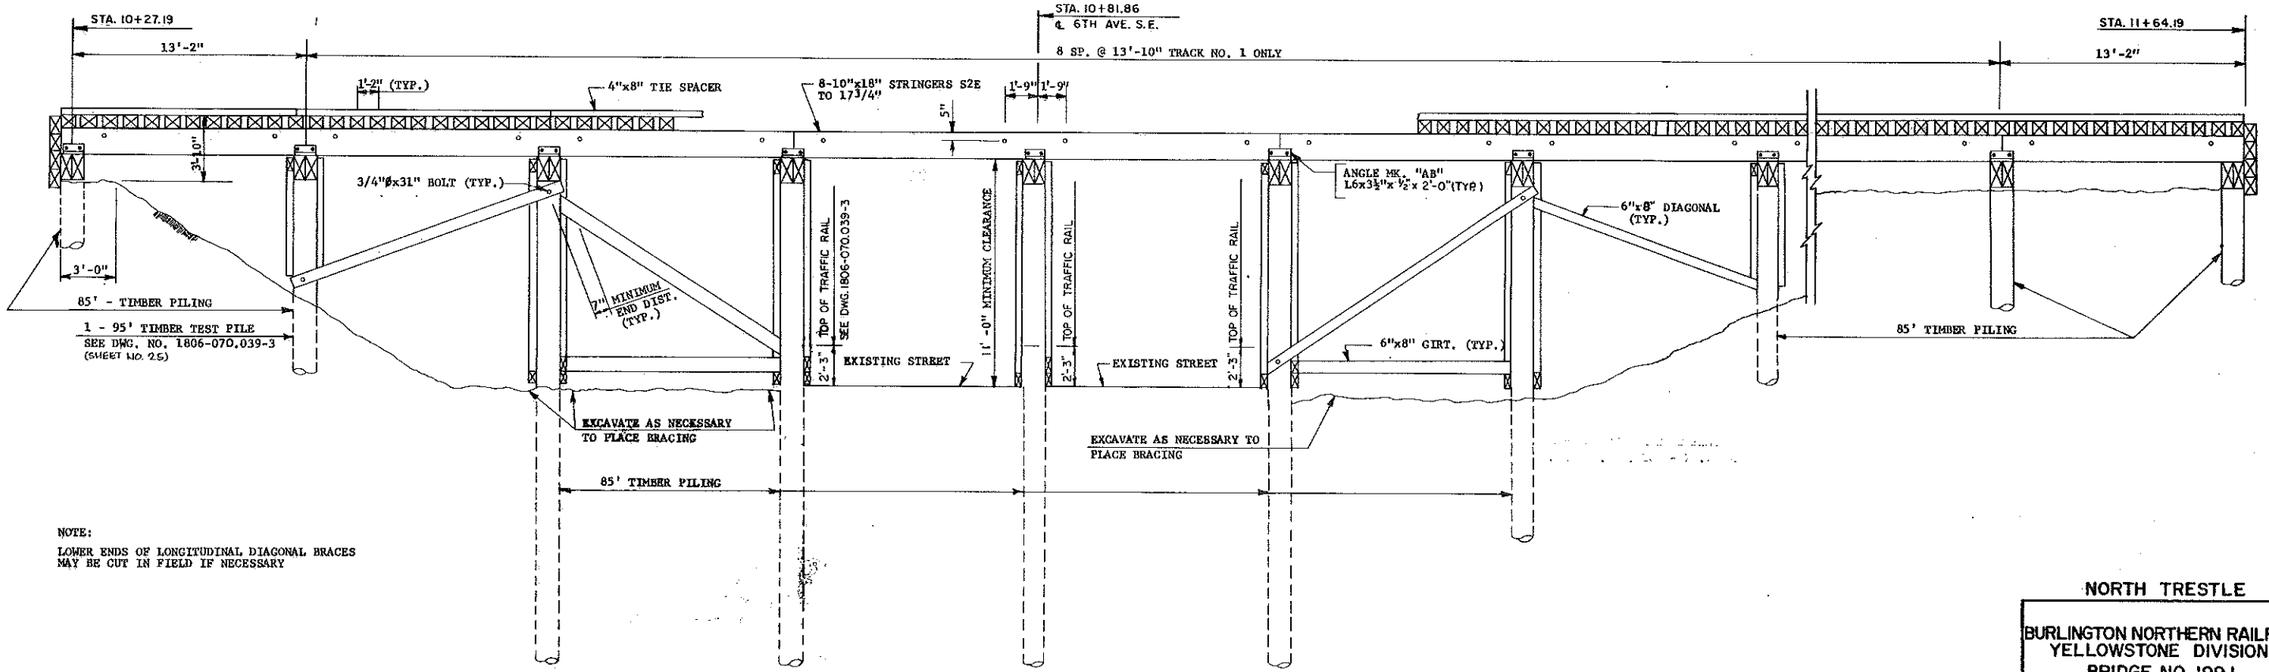
SHOWING SHEET PILING ARRANGEMENT & ANCHORAGE

NOTE:
STEEL SHEET PILING: THIS WORK SHALL CONSIST OF THE MATERIALS AND LABOR NEEDED FOR CONSTRUCTION OF STEEL SHEET PILINGS NECESSARY TO ALLOW THE EXCAVATION FOR FOUNDATIONS.

THE COST OF THE CABLES AND HARDWARE USED FOR ANCHORAGE, AND EXCAVATION NEEDED FOR WORKING SPACE SHALL BE INCIDENTAL TO THE PRICE BID FOR SHEET PILING.

DRAWINGS ON THIS PAGE DO NOT SHOW THE CABLE CONNECTIONS AND OTHER DETAILS PERTAINING TO SHEET PILING. CONTRACTOR SHALL SUBMIT A COMPLETE SET OF DRAWINGS WITH ALL CONNECTIONS SHOWN, OR HE MAY SUBMIT HIS OWN DESIGN AND DETAILS IF DIFFERENT FROM WHAT IS SHOWN ON THIS SHEET FOR APPROVAL BY THE BRIDGE ENGINEER. THESE DRAWINGS SHALL BE SUBMITTED AS SOON AS POSSIBLE AFTER CONTRACT IS AWARDED TO PROVIDE AMPLE TIME FOR ANY REVISIONS AND CHANGES THAT MAY BE REQUIRED BY THE SNRR COMPANY.

NO SPLICING OF THE SHEET PILES IS ALLOWED.



NOTE:
LOWER ENDS OF LONGITUDINAL DIAGONAL BRACES MAY BE CUT IN FIELD IF NECESSARY

DETAIL "A"

NOTES:

ALL TIMBER AND PILING SHALL BE UNTREATED.

FRAMING: UNTREATED PILES MUST NOT BE CUT FOR FASTENING OF BRACING. IF NECESSARY, FILLER BLOCKS SHALL BE USED TO FILL SPACES BETWEEN PILES AND BRACING.
--TOPS OF PILES SHALL BE CUT AND PROTECTED AS SHOWN.
--SWAY BRACING SHALL BE FASTENED TO CAPS WITH 3/4"ø BOLTS.
--USE 6" WIDE FILLER BETWEEN CAP AND SWAY BRACE IF PILES ARE OVER 16" DIAMETER.
--ALL BRACING SHALL BE FASTENED TO PILES WITH 3/4"ø BOLTS. WHEN BRIDGE IS LOCATED ON A HORIZONTAL CURVE OF 7° OR MORE, SPIKE GRIDS SHALL BE USED WITH BOLTS ON ALL BRACING CONNECTIONS.
--BORE GROOVES FOR SPLIT RINGS WITH SPLIT RING CUTTER HEAD M-14. DO NOT CUT OUT MATERIAL INSIDE OF GROOVES.
--ALL BOLTS THROUGH TIMBER SHALL HAVE A 5/16"x3 O.D. CUT WASHER OR EQUIVALENT UNDER BOTH NUT AND HEAD.
--USE APPROVED LOCK NUTS ON ALL BOLTS.
--HOLES FOR 3/4"ø BOLTS SHALL BE 13/16"ø - HOLES FOR 3/4"ø DRIFT BOLTS SHALL BE 3/4"ø.
--HOLES FOR DRIVE SPIKES SHALL BE 1/8" LESS THAN DIAMETER OF SPIKE.

PILING: ALL TIMBER PILING SHALL BE DRIVEN TO A MINIMUM BEARING CAPACITY OF 25 TON PER PILE. PILE DRIVING RECORDS SHALL BE RECORDED FOR EACH PILE WITH A COPY FURNISHED TO THE BRIDGE ENGINEERING. EACH PILE SHALL BE CHISEL MARKED WITH A HORIZONTAL LINE AND ROMAN NUMERALS TO RECORD THE DISTANCE FROM THAT LINE TO THE PILE TIP (SEE DETAIL "A").

DECK: TIES SHALL BE PLACED AT ABOUT 14" CENTERS.
--TIES SHALL BE BORED IN THE FIELD
--TIE SPACERS SHALL BE CUT TO PROPER LENGTH AND BOLT HOLES BORED IN FIELD

PILING: Piling shall be driven with a steam, air or diesel hammer with a rated energy and ram weight not less than 12,935 foot-pound-tons, as computed by the formula W(E-3938)+.65?E, where W is the weight of the ram in tons and E is the rated hammer energy. In no case shall the ram weight be less than 2700 pounds.

Boring indicate contaminated materials. Contractor to use all precautions necessary to maintain safe conditions.

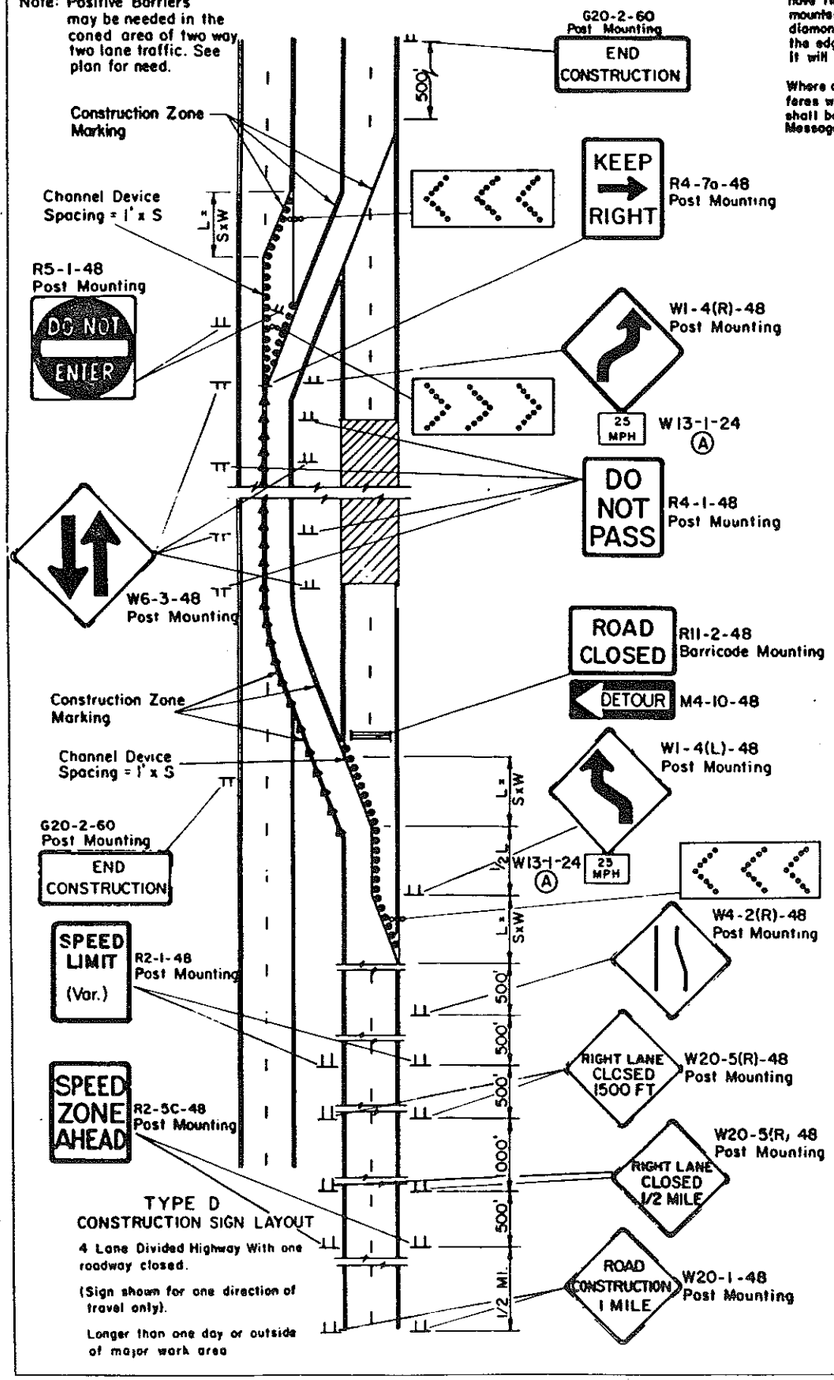
CONSTRUCTION SIGN AND BARRICADE LOCATION DETAILS

Ⓐ Where necessary safe speed to be determined by the Engineer.

Note: Positive Barriers may be needed in the coned area of two way two lane traffic. See plan for need.



TYPE D
CONSTRUCTION SIGN LAYOUT

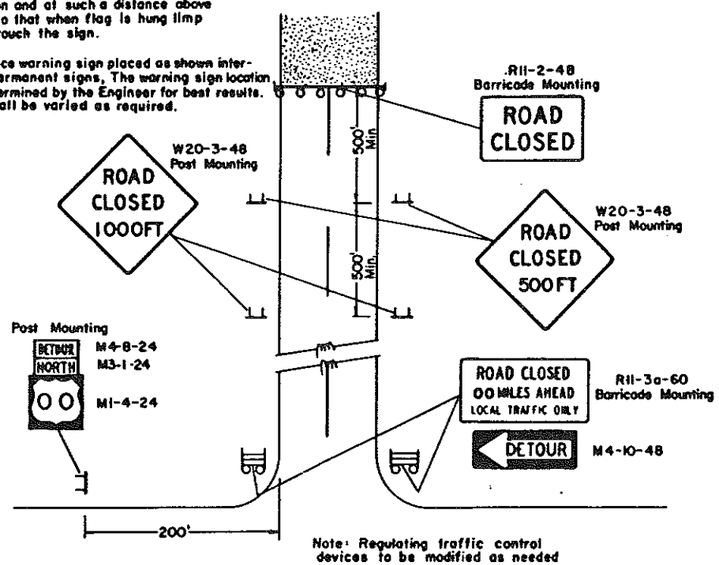
4 Lane Divided Highway With one roadway closed.

(Sign shown for one direction of travel only).

Longer than one day or outside of major work area

NOTE:
FLAGS: All warning signs shall have two orange warning flags 24" square mounted perpendicular to the edges of the diamond sign and at such a distance above the edges so that when flag is hung limp it will not touch the sign.

Where advance warning sign placed as shown interferes with permanent signs, The warning sign location shall be determined by the Engineer for best results. Messages shall be varied as required.



Note: Regulating traffic control devices to be modified as needed for the duration of the detour.

** Where necessary safe speed to be determined at the site by the Engineer

Sequencing Arrow Panels shall be Type A, B or C dependent on traffic volumes and speeds as follows:

Type A Sequencing Arrow Panels shall be used on roadways with slow moving traffic speeds and low volume (25 mph and 750 ADT. or less).

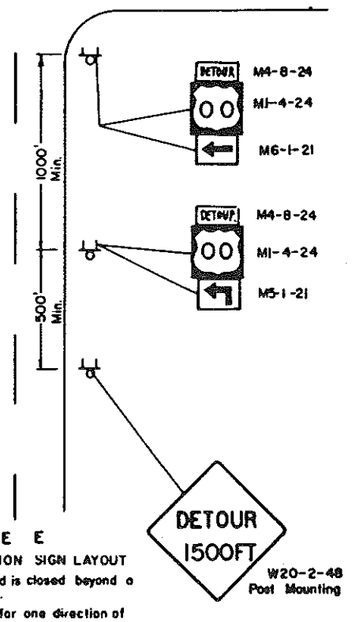
Type B Sequencing Arrow Panels shall be used on roadways with moderate traffic speeds and moderate traffic volumes (40 mph and less and 5000 ADT. or less).

Type C Sequencing Arrow Panels shall be used on roadways with high traffic speeds and high traffic volumes (More than 40 mph and over 5000 ADT).

Note:
L = Minimum Length of Taper
S = Numerical value of Speed limit or 85 percentile speed
W = Width of offset

L = S x W for freeways, expressways, and all other roads with speeds of 45 mph or greater.
L = WS²/60 for urban, residential, and other streets with speeds of 40 mph or less

KEY
- Type I Barricades
- Type II Barricades
- Type III Barricades
- Cones
- Lighting Device
- Flagman
- Delineator Drums
- Signs
- Type A Delineator
- Sequencing Arrow Panel



TYPE E
CONSTRUCTION SIGN LAYOUT

Where a road is closed beyond a detour point.

(Sign shown for one direction of travel only)

Sign not shown on detour shall be shown in plans and installed and maintained by the contractor.

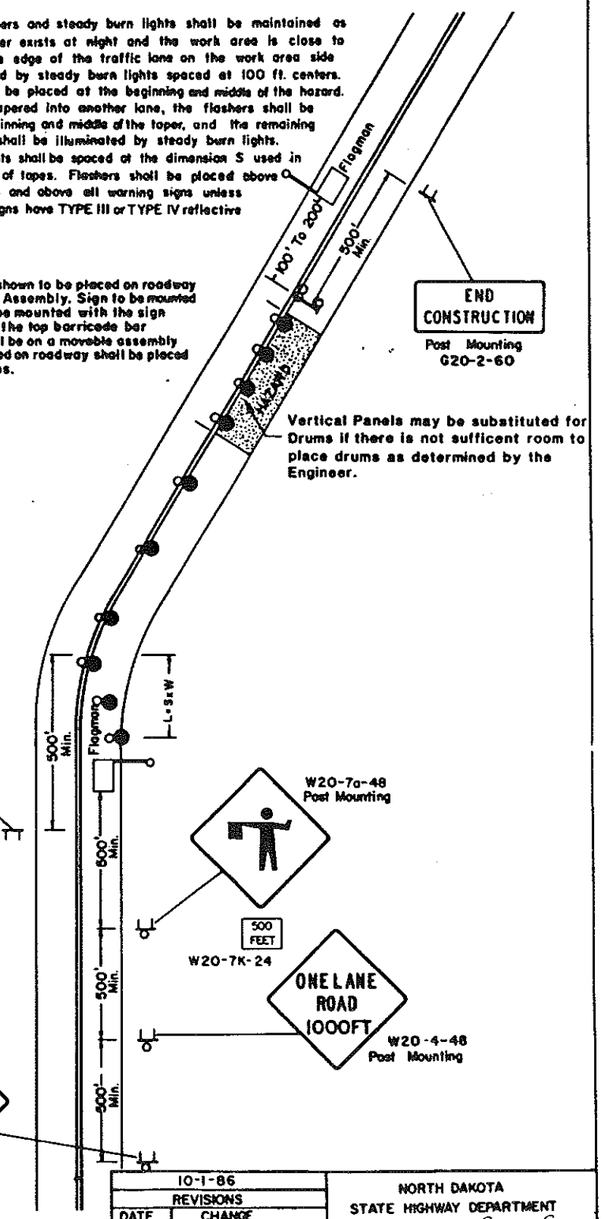
Longer than one day or outside of major work area

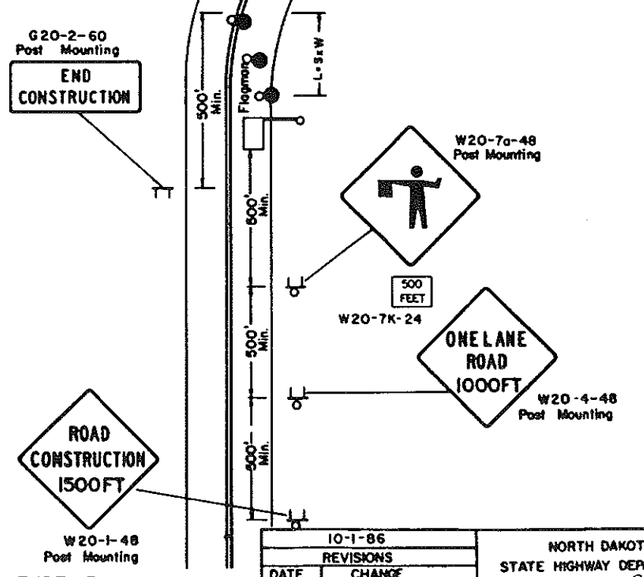
Delineator drums, Barricades or Cones used for tapering traffic shall be spaced at the demention "S".

"S" = Numerical value of speed limit or 85 percentile speed

Lighting - The flashers and steady burn lights shall be maintained as shown. If the danger exists at night and the work area is close to the traffic lane, the edge of the traffic lane on the work area side shall be illuminated by steady burn lights spaced at 100 ft. centers. The flashers shall be placed at the beginning and middle of the hazard. Where traffic is tapered into another lane, the flashers shall be placed at the beginning and middle of the taper, and the remaining tapering devices shall be illuminated by steady burn lights. The steady burn lights shall be spaced at the dimension S used in calculating length of tapes. Flashers shall be placed above the barricade bars and above all warning signs unless barricades and signs have TYPE III or TYPE IV reflective sheeted faces.

Mounting - Barricade shown to be placed on roadway shall be on a movable Assembly. Sign to be mounted on barricades shall be mounted with the sign bottom on the top of the top barricade bar intermediate Sign shall be on a movable assembly Sign show to be placed on roadway shall be placed on movable assemblies.





TYPE F
CONSTRUCTION SIGN LAYOUT

2 Lane Highway with one lane closed. Barricading is at a point where it is visible to approaching traffic

Warning sign sequence in opposite direction — same as one shown.

ATTENUATION DEVICE DETAILS

(Barrel Weights)

Note: Numbers indicated in barrels are required weights of sand fill.

Filling of Modules:

Each unit is composed of a cylinder 36 inches in diameter, a core, a disc to distribute the weight of the core, a flexible seal to keep the sand from leaking down and a lid (figure 2).

To erect-follow this procedure:

1. Place module in proper location as indicated on the plan.
2. Place proper care (see color codes and sand depth chart) in module.
3. Place plastic disc on top of core.
4. Place seal snuggly on top of disc with turned up edges overlapping of slits.
5. Fill sand to required depth (see color code for core and sand depth chart).
6. Place lid on top and press down to achieve tight fit.

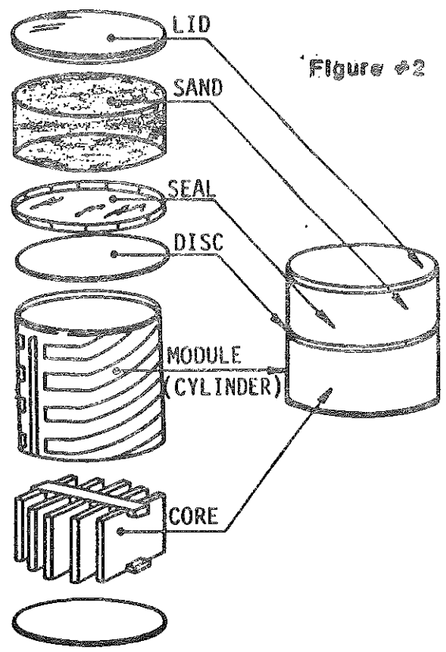

Figure #2

MODULE CONSTRUCTION DETAIL

MATERIALS:

The cylinders shall be approximately 36 inches in height and diameter. They shall be molded by a foamed center process from a tough, high density, polyethlene (or equal material which is durable, weatherproof, and esthetic) thickness approximately 5/16", weigh approximately 36 pounds. The module shall be of such design material and construction as to shatter under impact.

The lid shall be formed for high density polyethlene (or equal), .125 gauge and of such diameter so as to form a "press" fit on the modules, weight approximately five pounds.

The seal shall consist of 40 inch circular sheet of ionomer resin (or equal) slotted so as to form a dish to contain the sand placed inside the modules.

Discs shall be formed as the lids without the lip that fits around the top of the cylinder. They shall be of such diameter to provide a snug fit within the cylinder.

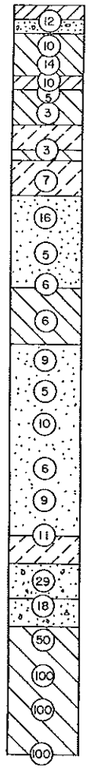
Spacer arrangement of cores shall be supplied in three heights: 11½ inches, 16½ inches, and 20½ inches, in accordance with the plans and fabricated from polystyrene (or equal) in accordance with the drawing. Density 1.5 PCF.

The contractor shall provide three barrel layouts as shown on the plans. In order to have sufficient numbers of replacement barrels for maintenance purposes, the contractor shall provide and have on hand throughout the duration of the contract three extra barrels for each type of layout in use at that time. Three extra barrels shall be 400, 700, and 1400 pounds. The extra barrels are to be used for maintenance purposes and shall be replaced in the extra barrel stock as damaged barrels are replaced in the construction zone.

Cost of attenuation device shall be paid for at the price bid for each location. The barrels damaged over or above the initial installation and the extra barrels shall be paid for as extra work.

Upon completion of the project, attenuation devices shall be left in place on the approach ends of the piers. Those attenuation devices and the maintenance stockpile shall become the property of the State Highway Department.

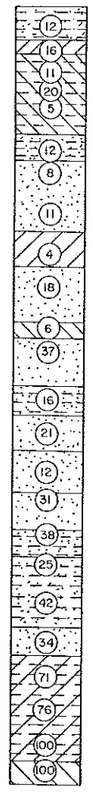
ATTENUATION DEVICE DETAILS AND NOTES



1644.1		
1642.1		FILL, MOSTLY CLAY, DARK BROWN, FROZEN
1640.1		FILL, MOSTLY CINDERS WITH A LITTLE SAND & GRAVEL, BLACK, FROZEN TO 3'
	(A-7-6)	CLAY, BROWN, RATHER STIFF
1634.1		
1632.1	(A-7-6)	CLAY, GRAYISH BROWN, RATHER STIFF
	(A-7-6)	CLAY, GRAY, MEDIUM TO SOFT, GASOLINE ODOR FROM 12'-18'
H_2O LEVEL @ 1627.1		
1623.6	(A-4)	SANDY LOAM, GRAY
1622.1	(A-7-6)	CLAY, BROWNISH GRAY, SOFT
	(A-4)	SANDY LOAM, GRAY, WET, LOOSE
1617.1		
	(A-2-4)	SAND, FINE TO MEDIUM GRAINED, GRAY, MEDIUM DENSE TO LOOSE, A FEW LAYERS OF FAT CLAY
1604.1		
	(A-7-6)	CLAY, GRAY, MEDIUM, A FEW LAYERS OF WATERBEARING SAND.
1596.1		
	(A-2-6)	SAND, GRAY, MEDIUM DENSE AND LOOSE, LAYERS OF SILT AND CLAY.
1569.1		
1565.1	(A-4)	SANDY LOAM, GRAY, WET, MEDIUM DENSE
1560.1	(A-2-4)	SAND WITH A LITTLE GRAVEL, FINE TO MEDIUM GRAINED, GRAYISH BROWN, WATERBEARING, DENSE
1556.1	(A-3)	SAND WITH A LITTLE GRAVEL, MEDIUM TO COARSE GRAINED, GRAYISH BROWN, WATERBEARING, DENSE
1538.1	(A-7-6)	SHALE, GRAY, VERY STIFF, (TEXTURAL CLASSIFICATION: CLAY

BORING NO. 1A

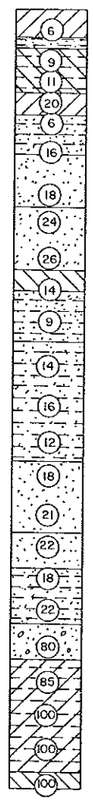
NORTHWEST EXISTING BRIDGE



1643.8		
		FILL, MOSTLY SILTY SAND, A LITTLE GRAVEL AND CINDERS, BLACK
1638.8		
1636.8		MEDIUM FAT CLAY, GRAYISH BROWN, RATHER STIFF (CH-CL) (MAY BE FILL)
		SILTY CLAY, BROWN, WITH A FEW LENSES OF DARK GRAY ABOVE 10', STIFF TO MEDIUM, A FEW LENSES OF FAT CLAY AND SILT (CL) (MAY BE FILL)
H_2O LEVEL @ 1626.8		
1625.8		
		SILTY SAND, FINE GRAINED, BROWNISH GRAY, WATERBEARING, MEDIUM DENSE (SM)
1621.8		
		SAND, FINE GRAINED, BROWN, WATERBEARING, LOOSE TO MEDIUM DENSE (SP-SM)
1611.8		
		FAT CLAY, GRAY, SOFT, A FEW LENSES OF SILT (CH)
1606.8		
		SAND, FINE GRAINED, GRAY, WATERBEARING, DENSE (SP-SM)
1598.8		
1596.8		FAT CLAY, GRAY, MEDIUM, A FEW LENSES OF WATERBEARING SAND (CH)
		SAND, FINE GRAINED, A TRACE OF GRAVEL, GRAY, WATERBEARING, VERY DENSE (SP-SM)
1589.8		
1585.8		SILTY SAND, FINE TO MEDIUM GRAINED, A TRACE OF GRAVEL, GRAY, WATERBEARING, DENSE, LENSES OF FAT CLAY (SM)
		SAND, FINE TO MEDIUM GRAINED, A TRACE OF GRAVEL, GRAYISH BROWN, WATERBEARING, DENSE, A FEW LENSES OF SILTY CLAY (SP-SM)
1580.8		
		SAND, FINE GRAINED, GRAY, WATERBEARING, MEDIUM DENSE, A FEW LENSES OF SILT (SP-SM)
1574.8		
		SAND, MEDIUM TO FINE GRAINED, GRAY, WATERBEARING, VERY DENSE (SP-SM)
1569.8		
1565.8		SILTY SAND, FINE GRAINED, GRAY, WATERBEARING, VERY DENSE (SM-SP)
1555.8		SILTY SAND, FINE TO MEDIUM GRAINED, A LITTLE GRAVEL, GRAY TO GRAYISH BROWN, WET, DENSE TO VERY DENSE (SM)
1551.8		SAND, MEDIUM GRAINED, A TRACE OF GRAVEL, BROWN, WATERBEARING, VERY DENSE (SP)
1536.8		SHALE, GRAY, A LAYER OF LIGNITE ABOVE 96' (TEXTURAL CLASSIFICATION; SILTY CLAY, VERY STIFF (CL))
1533.3		SHALE, BLACK, (TEXTURAL CLASSIFICATION; FAT CLAY, VERY STIFF (CH-OH)

BORING NO. 1

SOUTHWEST EXISTING BRIDGE



1644.2		
		FILL, MIXTURE OF LEAN CLAY AND SILTY CLAY, A LITTLE GRAVEL AND CINDERS, BLACK AND BROWN, FROZEN TO 3'
1640.2		
1638.7		FILL, MOSTLY SILTY SAND, BROWN
		SILTY CLAY, BROWN AND A LITTLE GRAY MOTTLED, MEDIUM TO RATHER STIFF (MAY BE FILL)
1632.2		
1629.2		MEDIUM FAT CLAY, BROWN AND GRAYISH BROWN, STIFF (CH-CL) (MAY BE FILL)
H_2O LEVEL @ 1627.2		
1623.7		SANDY SILT, BROWN, MOIST TO WET, LOOSE TO MEDIUM DENSE (ML)
		SAND, FINE GRAINED, BROWN, WATERBEARING, DENSE, A FEW LENSES OF SILTY CLAY (SP-SM)
1616.2		
		SAND, FINE GRAINED, GRAY, WATERBEARING, DENSE (SP-SM)
1607.2		
1604.2		MEDIUM FAT CLAY, GRAY, RATHER STIFF, A FEW LAYERS OF WATERBEARING SAND (CH)
1597.2		SILTY SAND, FINE GRAINED, GRAY, WATERBEARING, MEDIUM DENSE, LENSES OF FAT CLAY (SM)
		SILTY SAND, FINE GRAINED, GRAY, WATERBEARING, MEDIUM DENSE TO DENSE TO MEDIUM DENSE (SM-SP)
1580.2		
		SAND, FINE TO MEDIUM GRAINED, A TRACE OF GRAVEL, GRAY, WATERBEARING, DENSE, A FEW LENSES OF SILTY CLAY (SP-SM)
1570.2		
1565.2		SAND, FINE GRAINED, GRAY, WATERBEARING, DENSE (SP-SM)
1557.2		SILTY SAND, MEDIUM GRAINED, A LITTLE GRAVEL, BROWN, WET, DENSE, A FEW LENSES OF CLAYEY SAND AND WATERBEARING SAND (SM)
1552.2		SANDY GRAVEL, BROWNISH GRAY, WATERBEARING, VERY DENSE (GP-GM)
		SHALE, GRAY, (TEXTURAL CLASSIFICATION; SILTY CLAY, VERY STIFF, A FEW LENSES OF SILT (CL)
1536.2		
1533.9		SHALE, BLACK, (TEXTURAL CLASSIFICATION; FAT CLAY, VERY STIFF (CH-OH)

BORING NO. 2

SOUTHEAST EXISTING BRIDGE

1640 1630 1620 1610 1600 1590 1580 1570 1560 1550 1540 1530

CLASSIFICATION:

GP - POORLY GRADED GRAVELS AND GRAVEL-SAND MIXTURES, LITTLE OR NO FINES.
SP - POORLY GRADED SANDS AND GRAVELLY SANDS, LITTLE OR NO FINES.
SM - SILTY SANDS, SAND-SILT MIXTURES
ML - INORGANIC SILTS, VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS.
CL - INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS.
CH - INORGANIC CLAYS OF HIGH PLASTICITY, FAT CLAYS.
OH - ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY.

NOTES: ENCIRCLED NUMBERS INDICATE THE NUMBER OF BLOWS DELIVERED BY A 140 LB. HAMMER FROM A HEIGHT OF 30" TO DRIVE A CORE TUBE 1'-0".

THE BORING LOG DATA SHOWN IS FOR DESIGN PURPOSES ONLY. THE STATE ASSUMES NO RESPONSIBILITY IF SOIL CONDITIONS ENCOUNTERED DURING CONSTRUCTION DIFFER FROM THOSE SHOWN.

SYMBOLS:

P - MAXIMUM LOAD (LBS. SQ. FT.)
Ø - ANGLE OF INTERNAL FRICTION (DEGREES)
C - COHESION (LBS. SQ. FT.)
M - MOISTURE (PERCENT)
W - DRY WEIGHT (LBS./CU. FT.)
* - TRIAXIAL
